

Sy Lam Anh Tran (Justin)

BUSINESS ANALYST | PROCESS IMPROVEMENT | REQUIREMENTS | UAT

Professional Summary

Business Analyst with practical experience in business process analysis, requirements elicitation, stakeholder engagement, process mapping and User Acceptance Testing through Paxform internship and personal projects. I have experience in analyzing AS-IS and TO-BE processes using Gap Analysis, designing TO-BE workflows on online tools (e.g., Miro), documenting business requirements and user stories with acceptance criteria, identifying inefficiencies and proposing product improvements. I am comfortable working with business, technology, testing and client stakeholders to propose solutions. Proficient in Visio, Miro, Excel, SQL and Power BI, with experience working in Agile environments.

Skills

BUSINESS ANALYSIS and Process

Requirements elicitation & documentation, Stakeholder Engagement, AS-IS / TO-BE process mapping, Gap analysis and root cause analysis, User stories and acceptance criteria, Use case modelling, UAT and functional testing, Process improvement

Tools & Methods

Microsoft Visio, Lucidchart, Miro, Agile and Waterfall, Process modelling,

Data and Reporting

Excel (PivotTables, Charts, Slicers), Power BI, SQL / MySQL, Zoho CRM

Programming & Analytics

Python

Machine Learning (Linear Regression, KNN)

Employment History

Paxform – SaaS company

Business Analyst (Full-time internship)

- **Requirements elicitation:** Documented, gathered and analyzed business requirements from involving stakeholders, subsequently generated user stories with acceptance criteria to capture customers' needs. Specifically, two key business requirements are to reduce manual data entry errors and improve invoice processing.
- **Process Mapping:** Analyzed existing business processes by observing and interviewing stakeholders, documented current (as-is) workflows to design the future state (to-be), and identified process bottlenecks and improvement opportunities.
- **Stakeholder Collaboration:** Worked closely with multiple teams such as testing, software development team to discuss requirements, clarify software bugs/issues and help improve product based on customer feedback
- **User acceptance testing:** worked alongside with client representatives to test multiple product features such as signing electronic contracts, verifying client documents, ...
- **Product improvements:** Provided 5 actionable, data-driven recommendations to improve the individual customer mobile application, which focuses on user experience. As a result, customers provide approximately 3 positive feedback on Google Maps about new feature rollouts.
- **Automation and optimization:** Analyzed repetitive manual steps inside the submission approval or denial workflow and proposed an improvement based on RPA to eliminate manual processes and improve efficiency.
- **Use case modelling:** Analyse the e-contract signing process and developed a UML Use Case diagram in MS Visio and Use Case specification using Power Point for the Electronic Contract signing feature.

Home789 (Sydney, NSW)

9/2024 - 11/2025

SALESMAN (Part-time role)

- Data mining: Searched for and collected leads from multiple sources and categorizing them into each segmentation by using Zoho CRM
- Requirement gatherings: Gathered project requirements from developers and communicated them clearly to

customers regarding each project

Canavi Investment Production Joint Stock

10/2022 - 6/2024

SALESMAN (Full-time role)

Analytical skills: Conducted market analysis and customer segmentation (via FB groups, corporation websites, online forms/surveys) to identify and approach potential clients, which contributed to overall 15% in revenue growth. Using Zoho CRM and MS Excel to track, record, categorize leads (hot, cold, medium, promising, contact later leads).

WEWIN Advertising

10/2020-7/2022

Market Analysis, customer service & Salesman (Full-time role)

- Market Analysis: Conducted market research to identify ideal locations for installing billboards across various provinces, (closed contracts more than 10 locations)
- Stakeholder management: Collaborated with internal and external stakeholders to ensure smooth installation of advertising materials and compliance with local regulations, worked with teams to obtain licenses for billboards, which completed projects 20% ahead of schedule.

Education

Master of Information Systems - Central Queensland University (Sydney, NSW, Australia)

Graduation: October 2026, Current GPA: 6.425/7

Academic projects

Retail Store Operations & ERP Transformation — Business Analysis Case Study

08/2026-Present

Full case study: [<https://www.linkedin.com/in/sy-lam-anh-tran-24bb41364/>]

- Situation: A fashion retail chain is potentially experiencing missed sales, manual inventory process, limited visibility across stores' stock, incomplete CRM process, fragmented customer data, and impractical procurement process.
- Task: Conducted stakeholder analysis and requirements elicitation across 7 stakeholders (Head Office, Head Office CRM and Marketing, Store manager, Store staff and supervisors, customers, Head Office Procurement, IT/systems) to identify root causes of lose sales in a retail fashion chain.
- Action: Mapped AS-IS and TO-BE processes across 6 important business values (inventory, stock allocation, CRM, sales, procurement), identify main gaps through root cause and gap analysis. Additionally, translated the above findings into 7 business requirements, functional requirements, and user storis with acceptance criteria. Finally, carried out fit-gap analysis by comparing business requirements with existing system features (e.g., Odoo), and identify areas which require further changes or improvements.
- Result: Developed a complete BA solution which connects stakeholders' needs with business requirements, process improvements and ERP solution. This project aims to reduce sales loss by 30-40%, bridge the gap between in-store demand and Head Office stock allocation, fulfill customers' needs, enhance brand reputation, and resolve inventory-related issues.

Property Rental Management System- Business Analysis & Process Modelling

05/2026-05/2026

- Situation: The property rental business's spreadsheets have duplicate data, slow maintenance requests.
- Task: Create a data model and standardized business process for a Property Rental Management System to analyze requirements and improve operations.
- Action: To solve this, I modelled a Property Rental Management System in many design tools such as Microsoft Visio, Lucid Chart or Miro and evaluated visual aspect of each tool (including entities such as Tenant, Tradie, Real estate agent, buyer's agent, etc), which includes ER diagrams (using MS Visio) and data normalization (1NF to 3NF) and identified 7 constraints.
- Result: As a result, a 30% increase in operational efficiency and reduced costs/time across departments by 15%-20%.

Victorian Property Sales- Power BI

02/2026-02/2026

- Situation/Task: A need to provide clear insights on Victorian property sales performance for both internal teams and external stakeholders. Designed a well-structured, self-explanatory dashboard (Victorian property sales) that visualises multiple data-driven metrics and highlights key business insights.
- Action: I built a Power BI dashboard which has various charts (bar, line, pie, slicers) which makes the information clear, meaningful and explains all data by itself.
- Result: Sales team could deliver suitable housing products for each customer segmentation based on their needs.
